

Kwanza Basin, Angola

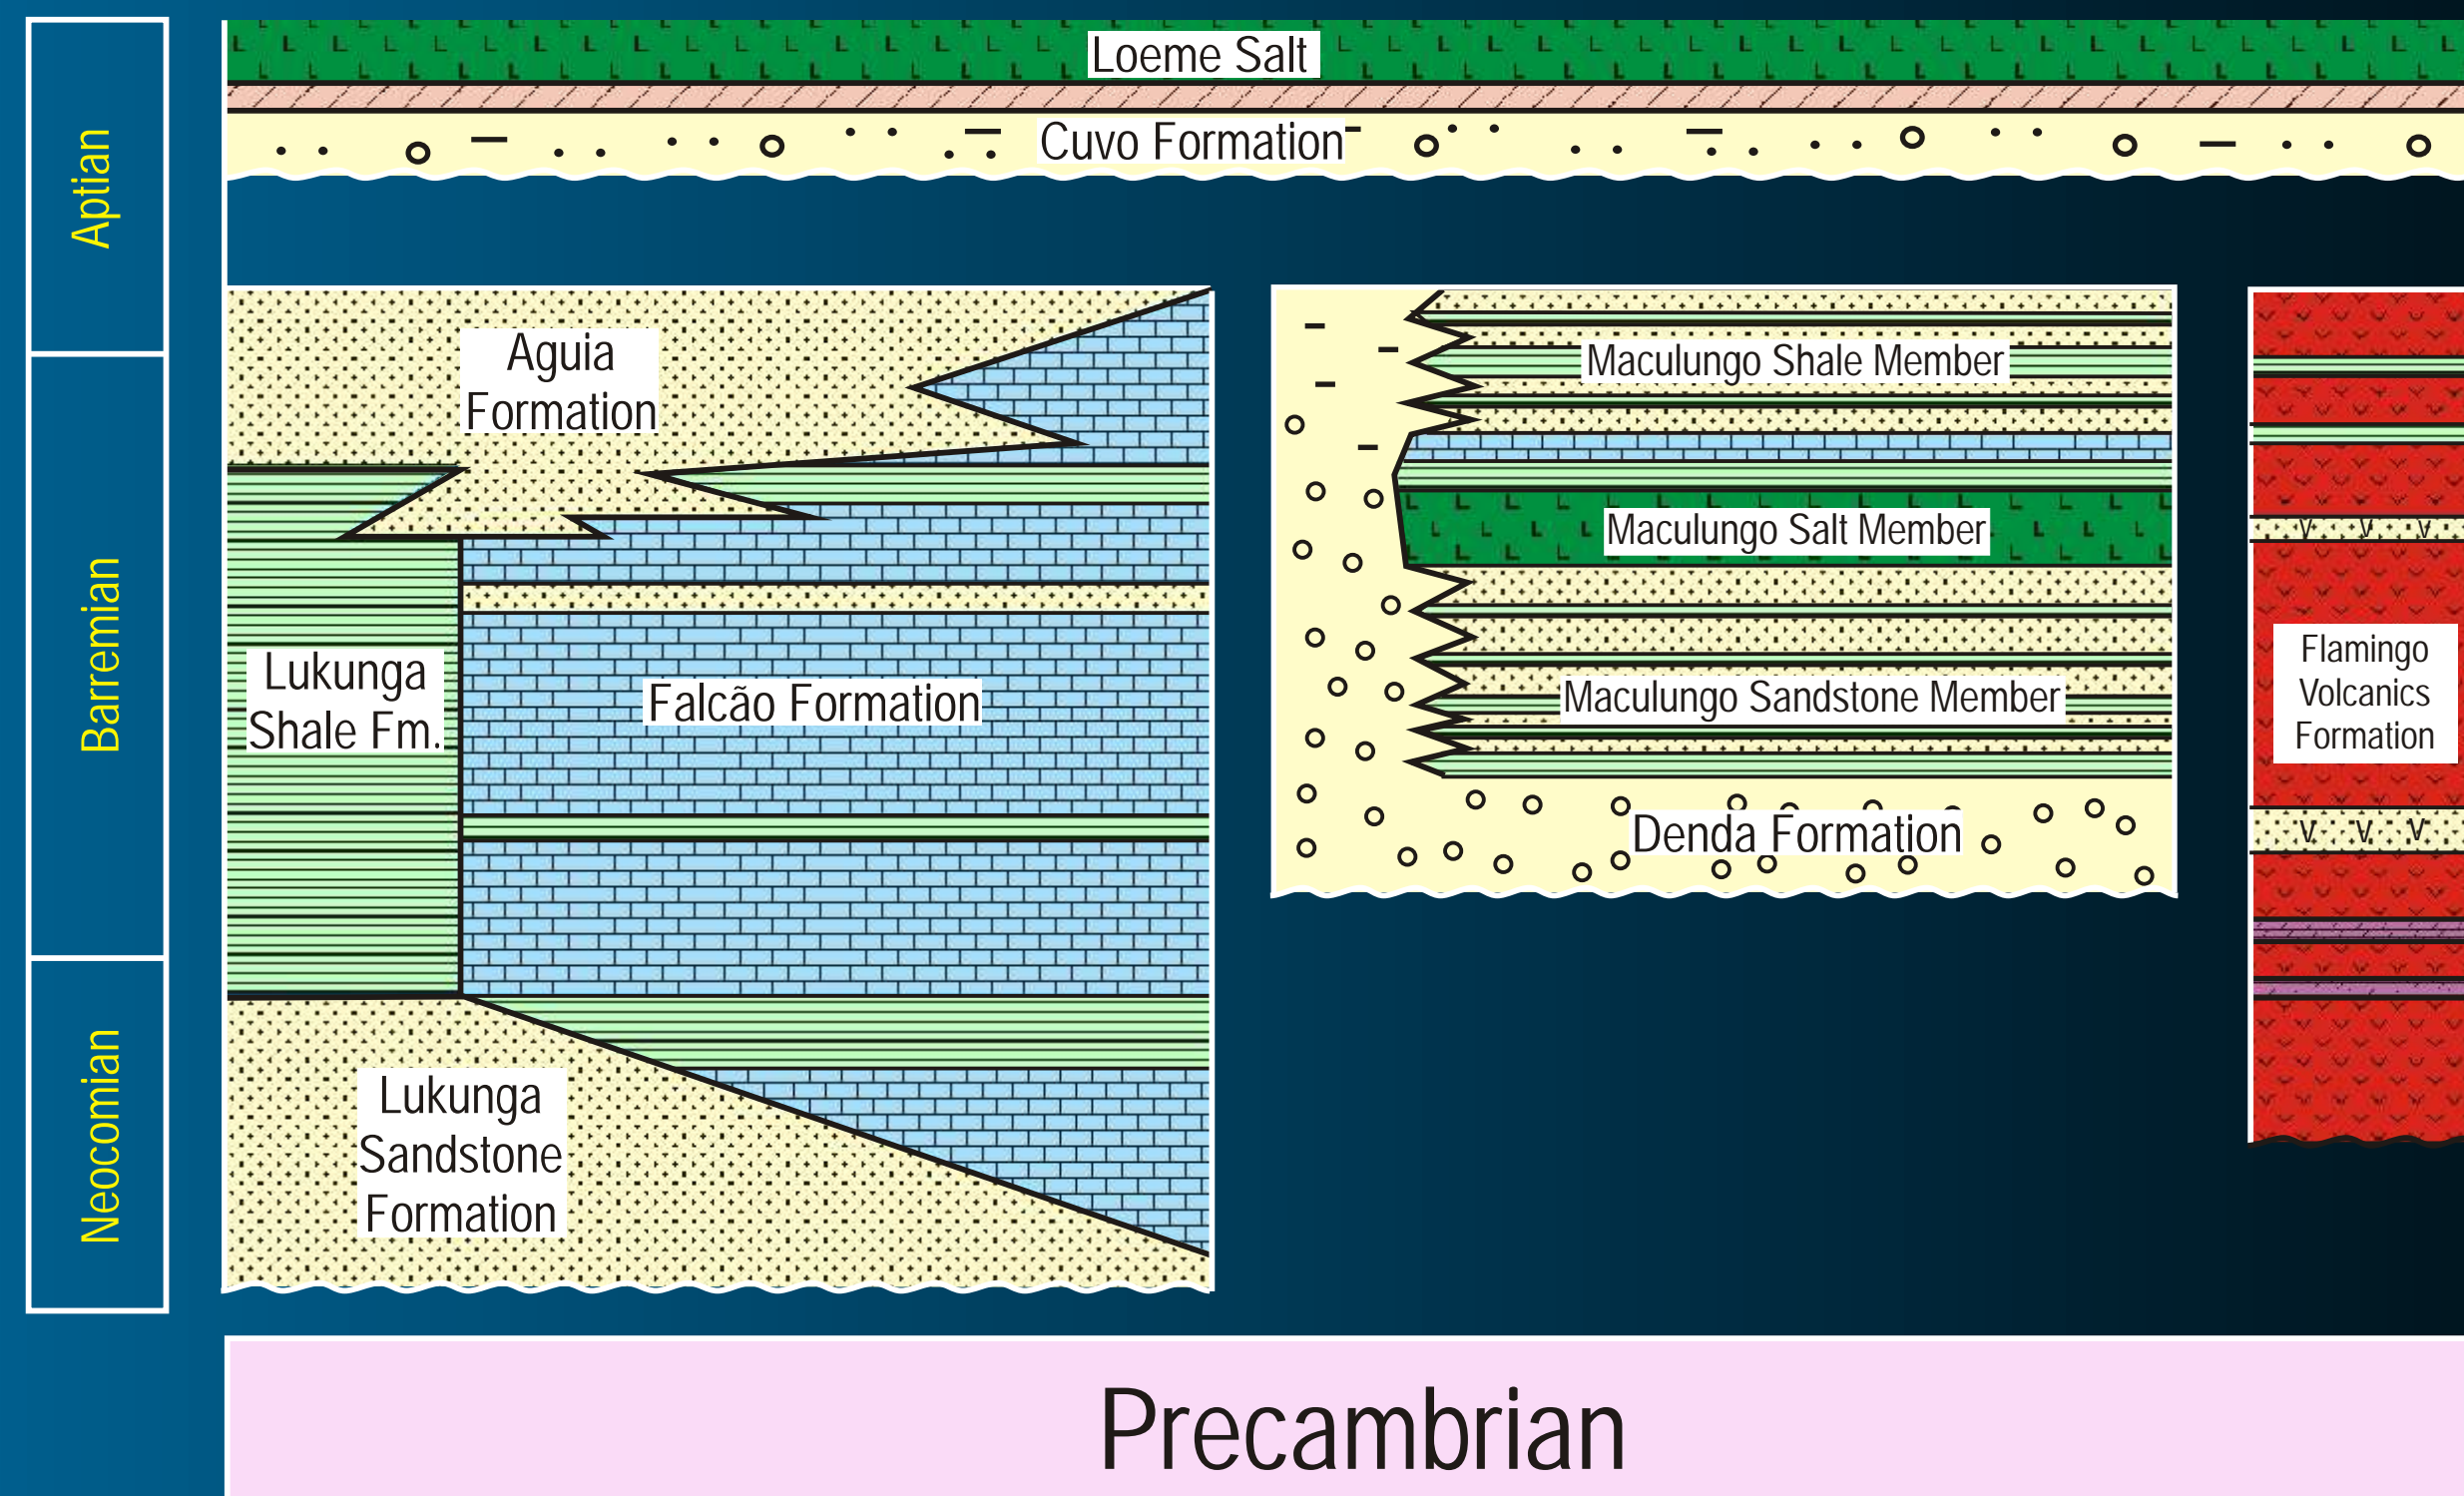

Lacustrine Basin Research Ltd, an associated company of Global Exploration Services Ltd, has completed a 15 well report on the Kwanza Basin, Angola. This report provides both a new stratigraphy and a new understanding of the depositional environments of the Pre-Salt basins of this part of onshore/offshore Angola. The interpretations available are based on data obtained through a lithostratigraphic and biostratigraphic analysis of fifteen wells and provide essential information for the understanding of both the offshore and the onshore basins:

- 102 page integrated and illustrated report providing a new stratigraphy and a new understanding of the Pre-Salt of the Kwanza Basin, Angola.
- Well summary logs for each well, presenting new dates, biostratigraphic tops, lithostratigraphic and environmental data.
- Well correlation charts. Faunal and Floral species range charts.
- A correlation of the Kwanza, Cabinda and Campos Basins.

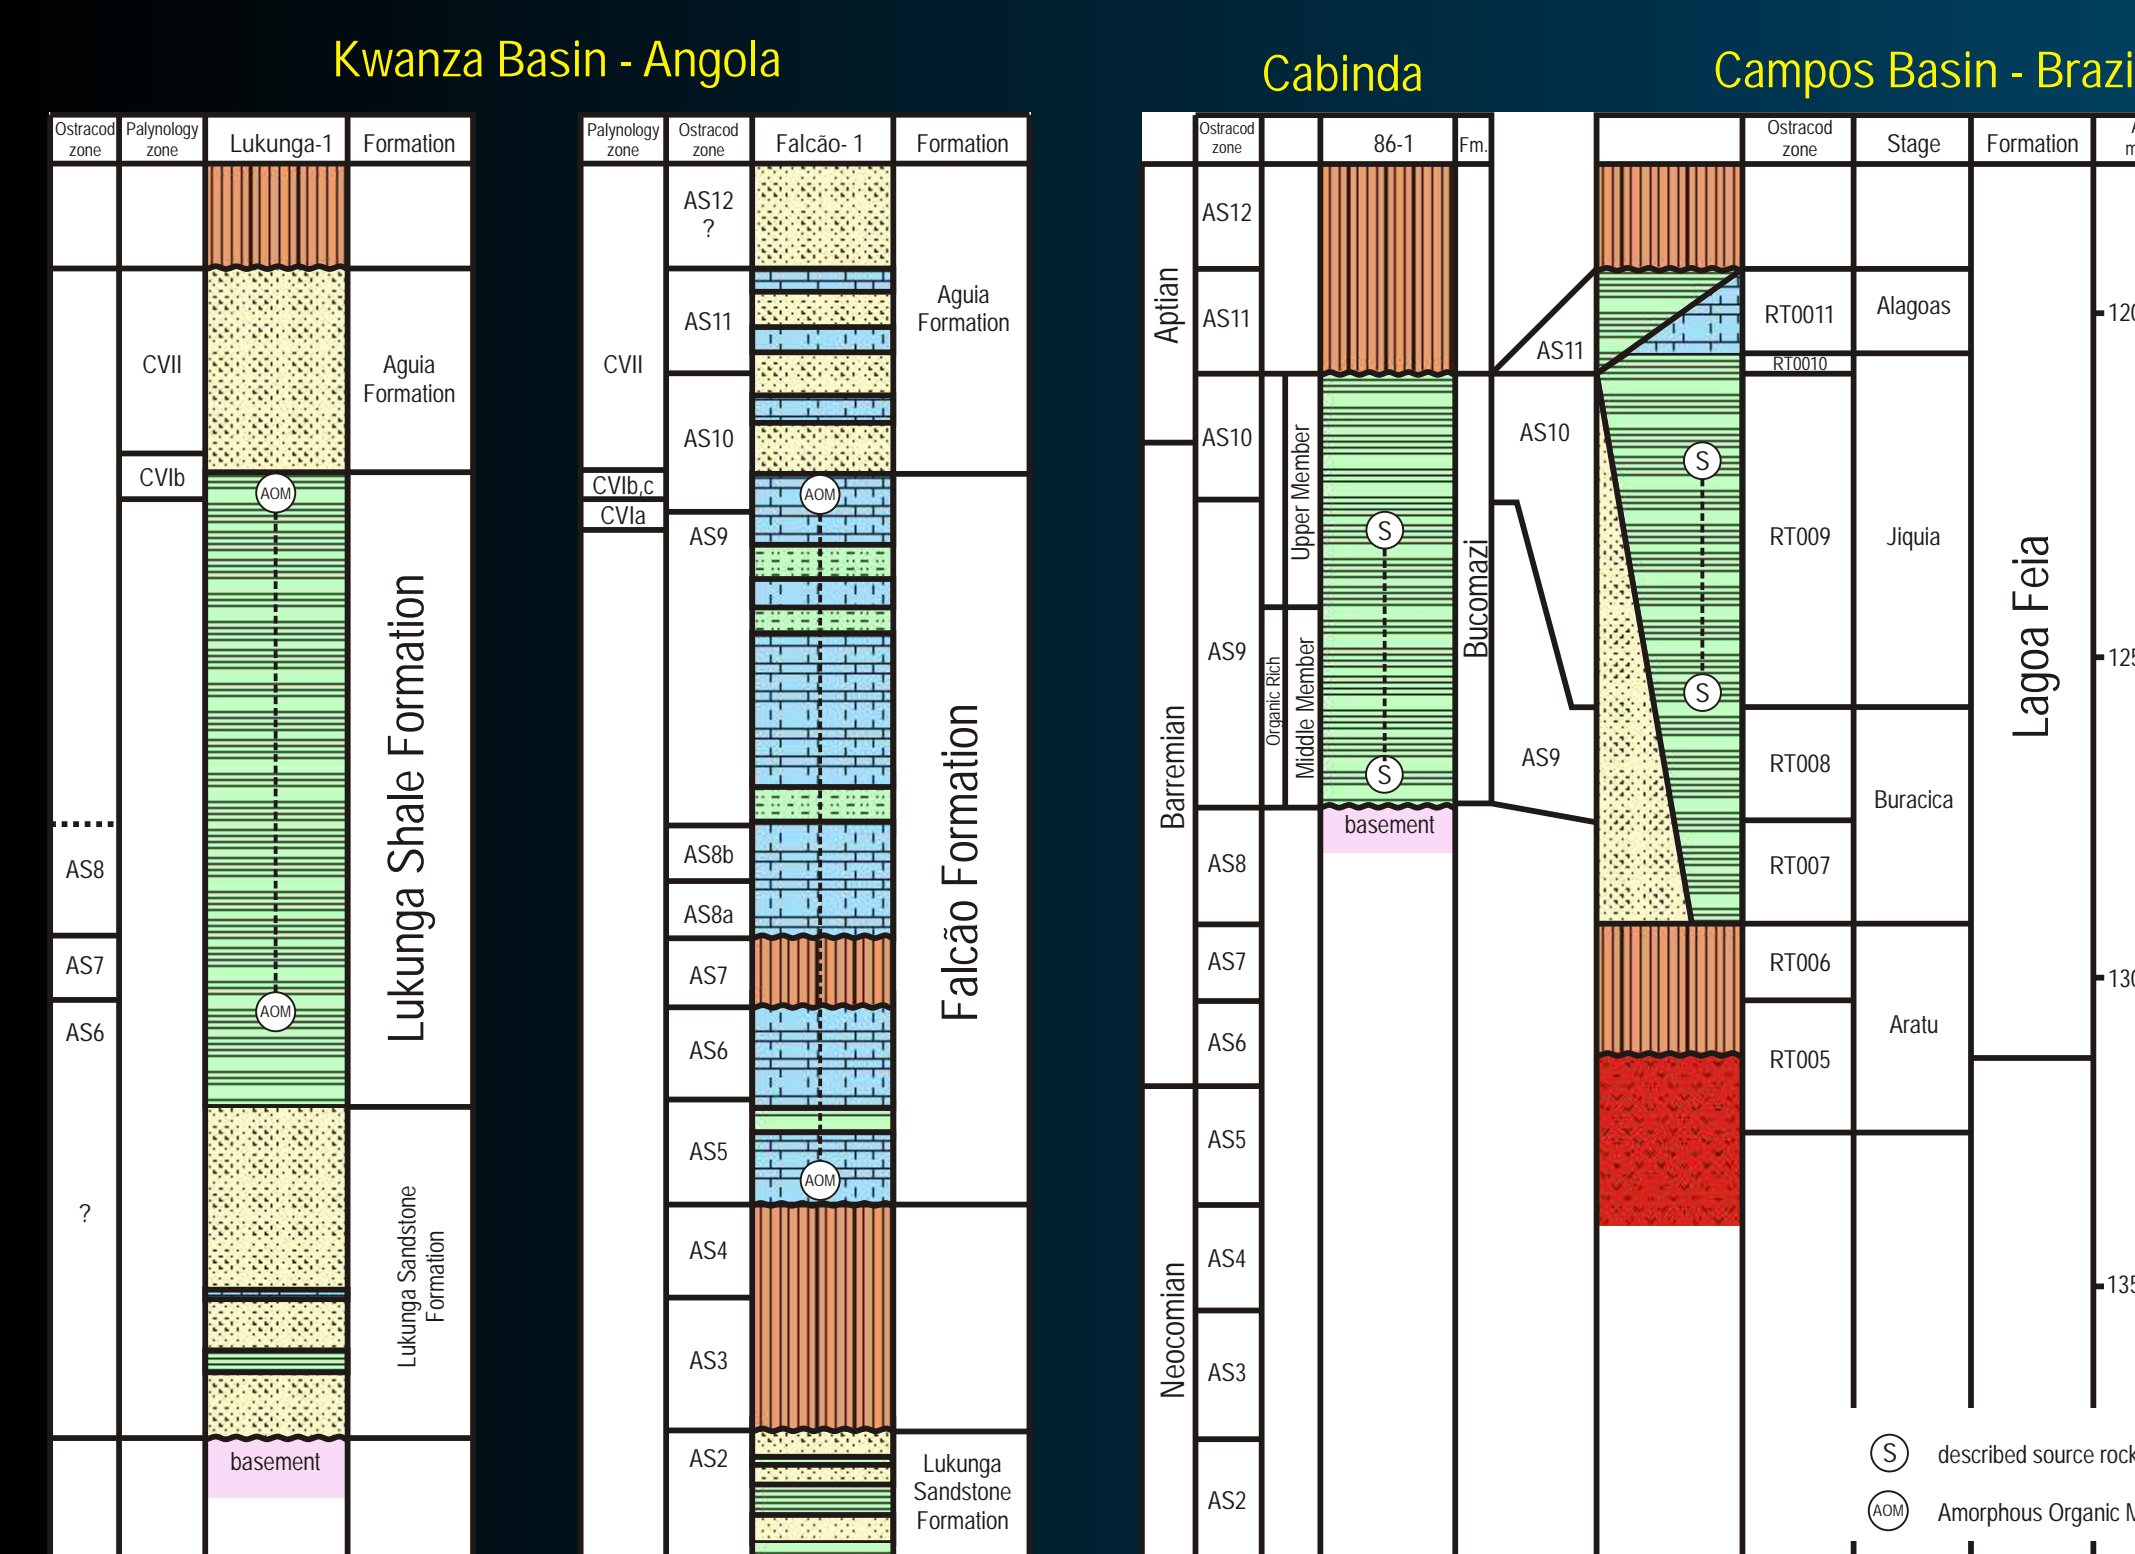

The purchase price of report together with group purchase discounts, available on application.
